

**Outline**

VTW Wafer-Cone® integrate VH Wafer-Cone® differential pressure flowmeter and small sized Variable Area flowmeter are integrated into one Wafer-Cone® bypass flowmeter. As the meter requires little straight runs and little head loss compared to orifice plate, it offers you reduction of construction cost and energy saving.

**Features**

- Simple installation  
Wafer connection makes installation simple. Flowmeter body flanges designed to match the pipe flanges guide to the pipe center line.
- Short straight runs  
The required straight runs are less than 1/5 of those required for orifice and vortex flowmeters. The narrow installation space allow simple and flexible piping arrangement plan. It leads to space and cost saving.
- Low pressure loss  
The meter requires smaller pressure loss compared to the other type of meter at the same flow rate.
- Matching any flow direction  
It can measure either horizontal, vertical, upward, or downward flow. The orientation of the indicator can be set in a simple way at field.
- Alarm contact as on option  
Maximum 2 alarm contacts with indicator are available. The meter serves both continuous flow indication and no flow detection alarm.

- Easy maintenance  
The simple and rugged mechanism constructed of small number of parts make maintenance easy.

Cautions on the use of glass tube variable area flowmeters

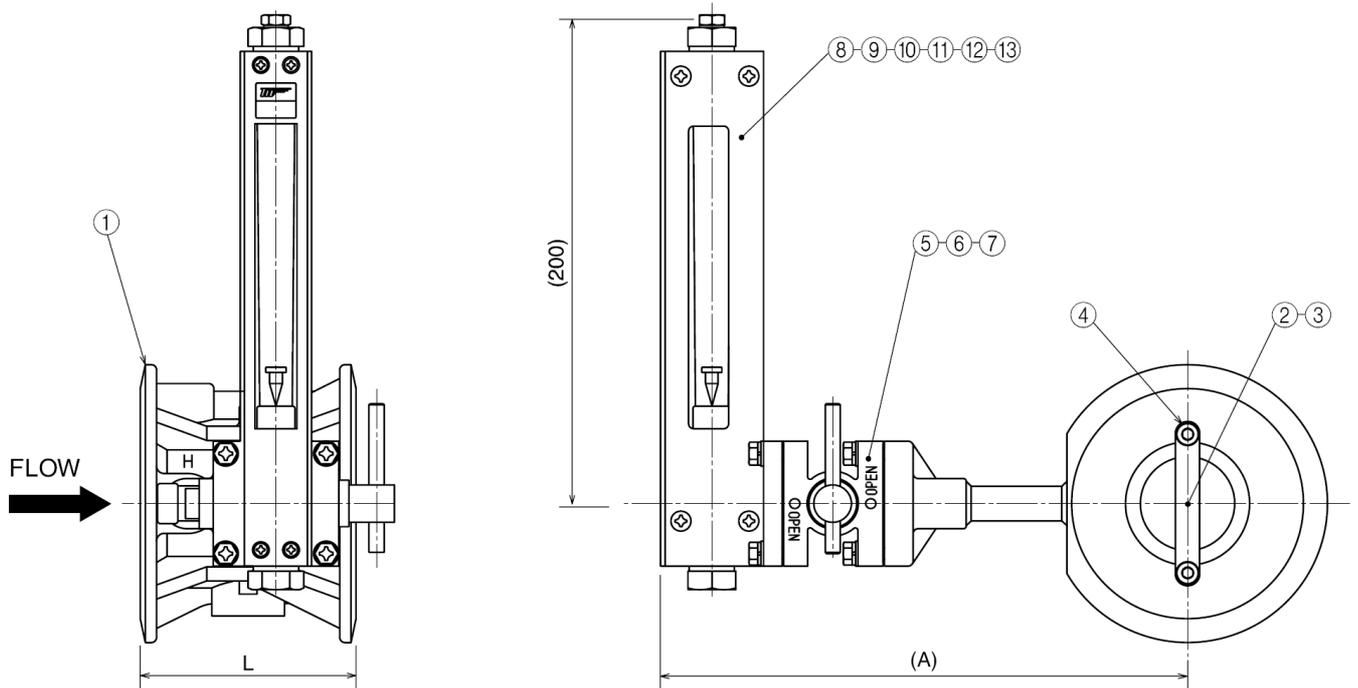

**CAUTION**

Avoid the use of glass tube variable area flowmeters for the following services.

- Liquid services subject to impulse pressure in the process.
- Secondary accidents might occur due to the breakage of glass in such services:
  - Toxic fluid such as poisons, stimulant and narcotics
  - Flammable fluids
  - Explosive fluids
- Gas handling process where breakage of glass might result in gas leakage or scattering of glass fragments.
- The installation places of the flowmeters where breakage of glass might be caused by the accidents from the surrounding piping or equipment.
- On-off operation where breakage of glass might be cause by the collision of the float inside meter due to the abrupt change of flow.
- Services where the heat shock by abrupt change of temperature is expected.
